

## Large Volume Pours

### Overview

Large volume pours are orders with more than 500 cubic yards. With large volume pours, everything must be poured within a short interval, meaning there are many logistics to balance. Hilltop coordinates with the contractor to set up and maintain a specific rate of concrete poured per hour to maintain the schedule.

### Benefits

Hilltop Companies is committed to fulfilling large orders for large portions of projects to be completed at one time, and often that means pouring overnight or on weekends.

### Technical Specifications

Concrete is typically ordered in 9 cubic yards, with large volume pours having anywhere from 500 cubic yards to 2,000 cubic yards or more. Hilltop Companies is able to pour an excess of 300 yards an hour out of the downtown plant for a dedicated project.

### Uses

Large volume pours are typically used for pavement, bridge decks, and roadways. It can also be used for high-rises or podium pours.

### Hilltop Project Examples

Hilltop plants are set-up in size and proximity for large volume pours for the tri-state area.
